

JSP Titan Safety Barrier

Product Images

Description

The JSP Titan Barrier is generally used as a means of blocking traffic or pedestrians from entering into an area that is closed off. Featuring a linking facility allowing the system to be easily joined, the barrier panels also feature a recessed reflective emblem. This reflective feature is designed to allow the JSP Titan Barriers to be stacked to a maximum of 40 high

- Made using precision injection moulded construction - made of prime grade virgin polypropylene
- 100% metal free and recyclable
- Central hand grip to enable easy carrying and positioning
