

Superior Twill Pattern Polycellulose Wipes

Product Images

Description

Comprised of absorbent wood pulp and polyester fibres that have been hydraulically entangled. Developed due to the need for a more aggressive, bulkier, cleanroom wipe. Twill pattern enables wipe to clean more aggressively and increases ability to collect contaminants

- Ideal as a cleanroom wipe where aggressive but clean wipe is required
- Twill pattern “collects” contaminants
- Ultralow particle generation and chemical extractables
- Very low linting, free of chemical binders
- Excellent tensile, tear and bursting strengths
- Cleanroom packed and double bagged
