

Stahlwille Combination Wrench 12PT

Product Images

Description

- Stahlwille Long Series Combination Spanners. Metric, drop forged high-grade special steels and chrome plated. Manufactured to DIN 3113 form B/ISO 7738 form B
- The spanners have been optimally hardened in continuous furnaces with no scale build-up or skin decarburisation and gently quenched in oil. They are extremely strong yet lightweight due to Stahlwille's 'double-T profile'
- The unique plating method prevents the problem of chrome flaking
- The ring end of the spanners are equipped with Anti-Slip Drive profile to permit high transmission of forces to the flats of the nuts and bolts without damaging them
- Long Style, longer than 13 series
- Jaws are set at 10° angle to the shank on the ring end and flat at the open end
- They are made from Chrome Alloy Steel Chrome plated
- Equipped with anti-slip drive
- DIN 3113 form A ISO 7738 form A (metric sizes)
